Education

Northeastern University

MS, Computer Science

Expected May 2027

Silicon Valley, CA (Remote)

California State University, Dominguez Hills

BS, Business Administration, Information Systems

May 2024

Carson, CA

Technical Skills / Certifications

Languages: C++, JavaScript, TypeScript, Python, Java, SQL, HTML, CSS, React, Node.js, REST API, GraphQL

Systems & OS: Linux (Ubuntu/Red Hat), Bash scripting, TCP/IP, DNS, C++ system-level programming

Cloud & DevOps: AWS (S3, DynamoDB, Route 53), Git/GitHub, CI/CD, Docker, Kubernetes, MongoDB, MySQL, PostgreSQL

Security & Networking: Cisco cybersecurity, firewall configuration, network architecture, threat analysis, Cisco Packet Tracer

Other: Agile/Scrum, Tableau, Power BI, Figma, Machine Learning | Eligible for U.S. Secret Security Clearance

Certifications: Cisco Cybersecurity Certificate, Cisco Networking Academy | CompTIA Security+

Professional Experience

Independent Consultant

Jan 2024 to Present

Freelance Full Stack Developer

Los Angeles, CA

- Designed and deployed full stack websites for LA area small businesses (React, Node.js, MongoDB), building RESTful APIs supporting 100+ daily requests with reliable backend performance.
- Increased client mobile engagement by 25% through responsive, mobile first UI; managed full project lifecycle from client requirements gathering to on time delivery.
- Coordinated directly with business owners to define technical requirements, iterate on designs, and maintain deployed applications, mirroring client facing IT support workflows.

Primoris, ARB Inc

Jan 2026 to Apr 2026

Safety Technician

Indio, CA

- Built a digital audit tracking system in Excel and Intellex to log 600+ weekly permit/JHA reviews and corrective actions, reducing repeat violations by 25% through data analysis and trend reporting.
- Conducted on site audits across active job sites, entering real time findings into Intellex and generating compliance reports; investigated 20+ incidents and tracked all resolutions to closure.

Schultz Industrial Services

Feb 2022 to Oct 2025

Safety Attendant

Los Angeles, CA

- Operated computer based multi gas detection systems to monitor real time air quality readings (O2, LEL, H2S, CO) during active chemical plant operations, protecting 20+ on site personnel per shift.
- Maintained continuous digital compliance records across multi year refinery shutdowns; interpreted live sensor data and escalated threshold alerts to prevent exposure incidents.

SpaceX

Feb 2020 to Aug 2021

Propulsion Technician

Hawthorne, CA

- Executed proof and leak testing on Starship propulsion systems using engineering schematics and digital work orders; verified torque specs, fluid line integrity, and component tolerances for flight readiness.
- Reviewed and bought off assembly work orders against engineering drawings, flagging non conformances and collaborating with engineers on design changes into production builds.
- Assembled flight ready Raptor engine hardware in ISO cleanroom environments; components deployed with 100% compliance to mission critical flight safety standards across orbital and ISS missions.

Projects

Database Web App | [GitHub](#) | HTML, CSS, JavaScript, Google Apps Script

- Full stack business tracking app with custom auth, inventory management for 10+ asset types, QA reporting, and Google Sheets as a real time backend database.
- Implemented role based access control and automated data validation, reducing manual entry errors and supporting multi user concurrent access across business operations.

SecureRoute: Cisco IOS Initial Router Configuration Lab | [GitHub](#) | Cisco Packet Tracer, Cisco IOS CLI

- Hardened a Cisco IOS router from default to secure baseline using encrypted access controls (enable secret), console port passwords, MOTD banners, and NVRAM persistence, aligned with NIST SP 800-53.
- Navigated User EXEC, Privileged EXEC, and Global Config modes and audited live router state via show running-config, mirroring Tier 1/Tier 2 IT support and NOC technician workflows.
- Addressed a critical security gap where default router credentials account for ~34% of network breaches (Verizon DBIR), demonstrating security hardening skills applicable to data center and IT roles.
